Simply Great Windows

Classic Design... New Technology

The Stanley Pro-Fit New Construction Double Hung Window provides traditional style with all of the performance expected from today's technically advanced windows. Classic craftsmanship, innovative engineering and maintenance free vinyl construction combine in this window to create an extraordinary product. This New Construction Double Hung offers today's builder or homeowner the quality and value they have come to expect from Stanley products.

Features and benefits

- Fusion welded vinyl construction is strong and durable. It will not rot, peel, flake or corrode, therefore never needs painting. Provides a strong, weather tight seal at all corners and joints.
- Beveled exterior profile creates curbside appeal.
- Integral 'J' type siding return makes it easy to return siding to the window. Saves on material and labor expenses associated with separate 'J' channels.
- Standard wood sizing and contoured grilles for enhanced aesthetic appeal.
- Optional extension jambs are available in 4 9/16" and 6 9/16" in both primed and clear. Extend window jamb to interior wall for easy finishing.
- Tilt sashes for easy cleaning from inside the home.
- Increased interior sash wall thickness reduces bowing of the sash.
- Interior sash glazing provides clean sight lines.
- Interlocking meet rails create a virtually weathertight seal between the sashes, helping to eliminate drafts.
- Double weatherstripping helps eliminate air, water and noise infiltration.
- 5/8" insulated glass is energy efficient. Save on utility bills. Optional LoE² glass for the ultimate in year-round comfort and energy savings.
- Block and tackle balance system for smoother, more even sash operation.
- Extruded full screen is much stronger than roll form screens.
- **LIFETIME WARRANTY**

Add personal style with architectural shapes.

Enhance other window designs while adding light, style and warmth to your home. The New Construction Double Hung is available with picture windows, half circles and geometric shapes offering all of these aesthetic features in addition to the low maintenance, energy efficiency and superior performance of their companion double hung window.

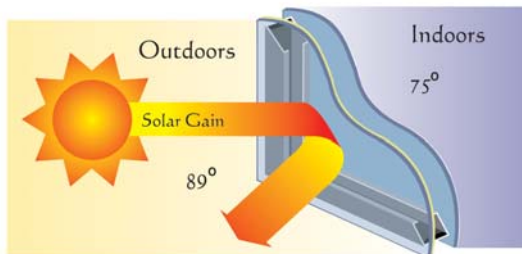

Built for comfort and energy efficiency

Thermal performance is an important factor to take into account when purchasing a window. The Stanley Pro-Fit Double Hung Window includes a number of standard features and available options which help to keep your home comfortable and energy efficient, while reducing energy costs.

LoE² Glass

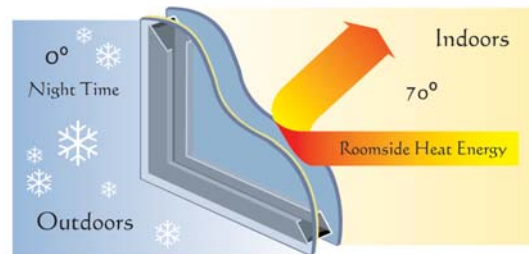

Stanley Pro-Fit Windows are available with LoE² Glass which provides year-round comfort and energy savings. It consists of two thin, transparent metallic coatings which are applied to the glass to selectively filter solar radiation. During the summer, LoE² reduces heat gain, keeping your home cooler. LoE² Glass helps keep you warmer in the winter by reflecting heat back into your home.

Summer Energy Savings and Comfort

In the summer, LoE² glass lets in visible sunlight while blocking infrared and ultraviolet energy, reducing cooling costs and fading and/or damage to furnishings.

Winter Energy Savings and Comfort

In the winter, LoE² glass reduces heating costs and keeps you warmer by reflecting roomside heat back into the home.

Setting **New** Standards!

THERMAL PERFORMANCE Tested to NFRC 100-97

5/8" Clear Glass	U Value = 0.51
5/8" LoE ² Glass	U Value = 0.37
5/8" LoE ² w/Argon	U Value = 0.33

STRUCTURAL PERFORMANCE Tested to AAMA/NWWDA 101/1.S.2-97

40" x 72"	H-R30
44" x 60"	H-R30
48" x 72"	H-R25

The Energy Star® Program

The U.S. Department of Energy and the U.S. Environmental Protection Agency have developed the Energy Star program to help consumers easily identify products that save energy. Stanley Pro-Fit Windows offer several glazing options to meet or exceed the program guidelines. Energy Star windows can help reduce annual heating and cooling costs by as much as 15%.

NFRC Certified

All Stanley Pro-Fit windows are certified by The National Fenestration Rating Council. The NFRC has established guidelines for testing and comparing the thermal performance of the entire window. This is the most reliable method of determining a window's energy saving ability.
