Simply Great Windows

A Cut Above the Rest

The Stanley® Pro-Fit Ultimate Double Hung Replacement Window offers an unparalleled combination of beauty, craftsmanship and performance. This superior window will enhance the appearance of any home while keeping it warmer in the winter, cooler in the summer, and help to reduce heating and cooling costs.

The Warmth of Wood without the Work

Our Ultimate Double Hung is available with an oak laminate interior. This laminate looks incredibly authentic and provides the warm feeling of wood without the extra maintenance.

THERMAL PERFORMANCE	
Tested to NFRC 100 - 97

7/8" LoE ² Glass	U Value=0.35
7/8" LoE ² w/Argon	U Value=0.31
STRUCTURAL PERFORMANCE	
Test Method: AAMA	Rating: H-R45

Features and Benefits

- Heavy duty, fusion welded vinyl is strong, durable and weather tight. Vinyl will not rot, peel, flake or corrode, therefore never needs painting.
- Optional medium oak interior laminate for the warm, elegant look of wood without the associated maintenance.
- Exterior convex frame profile creates a simple, yet elegant appearance.
- Tilt top and bottom sashes for easy cleaning from inside the home.
- 7/8" LoE² insulated glass for the ultimate in year-round comfort and energy savings.
- Warm Edge Intercept™ spacer reduces condensation, stress cracks and seal failures.
- Dual weatherstripping creates two points of contact between the frame and sashes, providing a seal that is approximately twice as effective a single contact point.
- Double strength glass is stronger than standard single strength glass. It is less prone to breakage and reduces sound transmittance.
- Optional color coordinated grilles are available in several patterns for white or beige windows. Choose between white exterior/medium oak interior or brass tone grilles for the oak laminate window.
- Constant force balance system for smoother, easier sash operation. Balances never need adjusting.
- Dual cam locks (on windows over 24" wide) draw interlocking meet rails together to create a virtually weather tight seal between the sashes, helping to eliminate drafts.
- Flush mount, low profile tilt latches for a cleaner, more attractive appearance.
- Spring loaded vent latches allow for partial ventilation at the bottom sash.
- Heavy duty extruded aluminum locking half screen with fiberglass screen cloth included with window. Much more durable than roll form screen frames. Optional full screen for full top and bottom ventilation.
- Limited Lifetime Warranty.

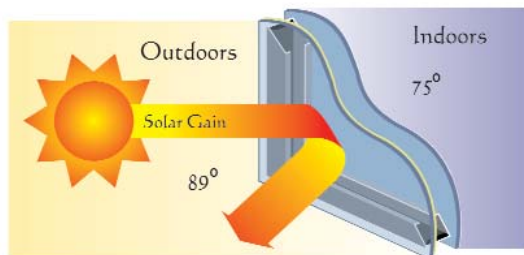

Built for comfort and energy efficiency

Thermal performance is an important factor to take into account when purchasing a window. The Stanley® Pro-Fit Ultimate Double Hung includes a number of standard features and available options which help to keep your home comfortable and energy efficient, while reducing energy costs.

LoE² Glass

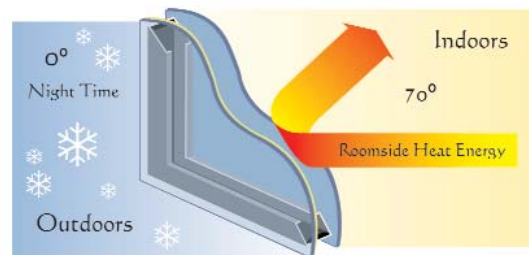

This Stanley® Pro-Fit window is standard with LoE² Glass which provides year-round comfort and energy savings. It consists of two thin, transparent metallic coatings which are applied to the glass to selectively filter solar radiation. During the summer, LoE² reduces heat gain, keeping your home cooler. LoE² Glass helps keep you warmer in the winter by reflecting heat back into your home.

Summer Energy Savings and Comfort

In the summer, LoE² glass lets in visible sunlight while blocking infrared and ultraviolet energy, reducing cooling costs and fading/damage to furnishings

Winter Energy Savings and Comfort

In the winter, LoE² glass reduces heating costs and keeps you warmer by reflecting roomside heat back into the home.

Setting **New** Standards!

The Energy Star® Program

The U.S. Department of Energy and the U.S. Environmental Protection Agency have developed the Energy Star program to help consumers easily identify products that save energy. Stanley® Pro-Fit Windows offer several glazing options to meet or exceed the program guidelines. Energy Star windows can help reduce annual heating and cooling costs by as much as 15%.

NFRC Certified

All Stanley® Pro-Fit windows are certified by The National Fenestration Rating Council. The NFRC has established guidelines for testing and comparing the thermal performance of the entire window. This is the most reliable method of determining a window's energy saving ability.
